

Improve public transport!

Junior Backend Developer

About MOTIONTAG

MOTIONTAG's mission is to create seamless, sustainable and smart mobility for the benefit of both people and the environment. Our technology infers insights from smartphone sensors about how, when and where people use transport services. We deliver the intelligence to help our clients understand their customer behaviors, optimize existing transport systems and create new, seamless mobility experiences while also protecting the privacy of end users.

We are a small team of currently 26 employees. We are well funded and work on interesting projects in mobility.

What's in it for you?

- Be part of our growing core team and experience the scale-up of a startup
- Work on various problems with responsibility from the beginning
- Develop a product with us that changes the future of mobility
- Family-friendly workspace: partial remote work and flexible working hours
- Experience a fun and motivated environment with typical start-up goodies like fresh fruit, cookies, and coffee, and of course a ping pong table
- Earn a competitive salary and stock options

We need your support in

- Developing and using RESTful APIs
- Working with geodata and algorithms
- Working with server configuration management, provisioning and templating tools
- Maintaining and extending a scalable backend-infrastructure

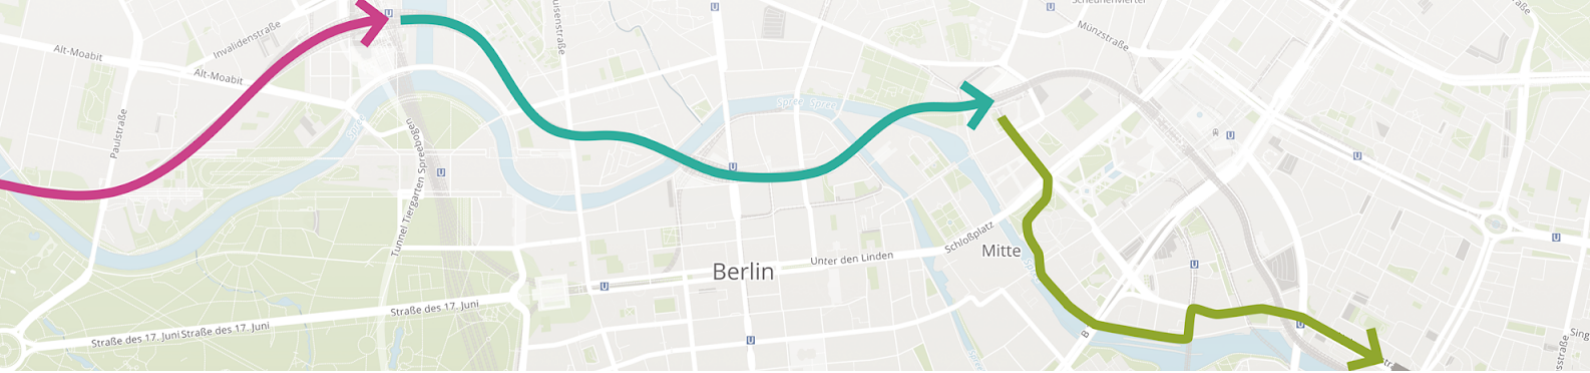

Your profile

- At least 2 years experience in backend development
- Basic understanding of system architecture, software testing, continuous integration, and code review
- You focus on quality and care about clean code
- Good knowledge of a scripting language like Ruby or Python
- Professional proficiency in English

Bonus points for (but not required)

- Test-driven development with Ruby-on-Rails and RSpec
- Web development experience
- Experience with SQL-Databases, preferably PostgreSQL
- Experience with Linux server administration and automation, preferably Ansible
- Experience with public cloud providers and infrastructure-as-code, preferably AWS and terraform

Start date: ASAP
